

Molecular Biology Internship-6 months (M/F) Lille, France (ref: MBCR02)

ImaBiotech is a contract research organization that provides support to pharmaceutical companies in the development of new therapies in a variety of therapeutic areas. Our ImaLink™ platform promises substantial improvements to the accuracy of measurement of drug efficacy in diseases like cancer and leverages *in situ* single cell imaging approaches to provide next generation of predictive models for targeted therapies.

Job Description:

We're looking for a Molecular biologist intern to join our team and help us achieve our translational research goals for system biology assessment. You will work alongside leading innovators in the field of medical biology, and play a critical role by generating qualitative high-throughput spatial-omics data on tissue.

Missions:

Within an expert team in the field of spatially-defined proteomics and transcriptomics dedicated to the development of preclinical and clinical biomarkers, you will be performing:

- Operate state-of-the-art spatial-omics and microscopy devices
- Develop and apply spatial biology protocols, in particular for transcriptomics/proteomics and high multiplex IHC
- Participate in the interpretation of the results and in quality-related procedures (write SOPs)

Qualification and Skills:

- Intellectual curiosity and the ability to learn quickly in a complex space
- Last year of Master (Bac + 5 in Biology or Molecular Biology)
- Ideally experience in RNA extraction/hybridization, flow cytometry and immunostaining
- Fluent in English
