

## Access PK and biodistribution simultaneously

ImaBiotech launches an innovative but cost-effective bioanalysis service that combines robust mass spectrometry based bioanalytical method including drug distribution to quantify drug and metabolites in plasma and tissues. This allows you to select the right dose, the right route of administration, anticipate on/off-target engagement and finally accelerate your drug discovery and development programs.

### Combine discovery PK with biodistribution

- For Faster lead selection
- For Better lead selection

Same animal study

Overall  
distribution/accumulation/penetration per organ

Simultaneous  
metabolites  
evaluation

We help you make **Decisive** selection and development of your leads from discovery stage and includes:

- GLP and non GLP platforms
- Mass Spectrometry Expertise with +20 years of experience in regulated bioanalysis
- Mass Spectrometry Imaging leader team with proprietary technology and softwares
- Very fast turn around time (4 weeks) with 40 MS platforms
- Lab Facilities in Europe and USA

Don't miss our bundle service !

- LC-MS/MS bioanalytical
- Mass Spectrometry Imaging (MSI)
